Office Action Summary	Application No. 09/788,274	Applicant(s) KETCHUM, GARY T.	
	Examiner Michael Brown	Art Unit 3772	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Ketchum '804.

Ketchum discloses in figures 1-3 a leak point wetness sensor for urological investigations comprising an instrument body 11, having a passage 12, to pass catheter 13, a receptacle 21, in the instrument body, a temperature sensitive detector sensor (abstract, lines 4-5), mounted to the instrument body, a circuit 37, adapted to generate and provide a reference output simulative of a selected temperature below that of an anticipated temperature of a leaked liquid, the circuit generating a reference output independent of ambient temperature (abstract, lines 11-14), a comparator 40 responsive to the difference between the outputs to detect and inform when the signal output sufficiently exceeds the reference output, the drainage channel 22 extends from the receptacle to the outside of the body, a recorder means 41, the circuit is adapted to detect a rate of change in the signal output from the temperature sensitive detector sensor, the detected rate of change corresponding into a rate of change in temperature

Art Unit: 3772

at the detector sensor, the comparator outputs a signal indicating the liquid has leaked from the urethra, the circuit generates a signal indicating that liquid has leaked from the urethra and the circuit differentiates the signal output from the temperature sensitive detector sensor and means for detecting 40 when the signal output from the detector sensor sufficiently changes relative to a reference signal that is independent of ambient temperature.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. No additional prior art was cited in this office action.
